

# Recreation Energy Conservation Program Guidebook

This Guidebook provides an overview of the eligibility requirements, available funding, and process for municipalities to participate in the Recreation Energy Conservation (REC) program.

## 1.0 Program Overview

Recreation facilities typically use more energy and produce more greenhouse gas (GHG) emissions than other municipal facilities. The Recreation Energy Conservation (REC) program helps municipally-owned recreation facilities reduce energy use and GHG emissions by providing financial rebates to help identify energy-saving opportunities and implement energy-saving projects. Through REC, municipalities can receive rebates for Scoping Audits and Engineering Studies that support investment decisions in addition to Implementation Project rebates for implementing energy efficient retrofits in their facilities.

## 2.0 Eligibility

### 2.1 Eligible Participants

The following organizations are eligible to participate in the REC program:

- a. Municipalities: all designated municipalities within the province of Alberta are eligible to participate in the REC program. As per Section 1(1)(s) of the [Municipal Government Act](#), a “municipality” is defined as:
  - i. a city, town, village, summer village, municipal district or specialized municipality,
  - ii. a town under the Parks Towns Act, or
  - iii. a municipality formed by a special Act; or,
  - iv. if the context requires, the geographical area within the boundaries of a municipality described in sub-clauses (i) to (iii).
- b. Community-related organizations: non-profit community-related organizations (CROs) are eligible to participate in the REC program if the Project is within a municipally-owned facility. While CROs are eligible to participate, the Municipality must submit the REC Application and be the signatory to the Offer Letter. All reimbursements of rebates made under the program will be directed to the Municipality. Such instances of community-related organization participation will be evaluated on a case-by-case basis.

### 2.2 Eligible and Ineligible Facilities

Eligible facilities must be recreationally-focused and utilize complex and high energy consuming systems. The following municipally-owned recreation facility types are eligible for the REC program:

- a. Arenas and curling rinks;
- b. Aquatic centres and swimming pools;
- c. Dry sport centres such as facilities that do not include ice surfaces or aquatic facilities;
- d. Multiplexes such as facilities that include a combination of dry sports, ice surfaces, and aquatic facilities;
- e. Athletic parks such as football or soccer parks with high-intensity lighting; and
- f. Other recreationally-focused facilities deemed eligible by the MCCAC.

The following are not eligible for the REC program:

- a. New facilities/additions under construction
- b. Public gathering spaces such as community halls;
- c. Non-profit organizations who own their facility;
- d. Agricultural societies;
- e. Private facilities;
- f. Facilities operated by a for-profit business or organization, including facilities that are located on lands owned by a municipality or leased from a municipality;

- g. Provincially or federally operated buildings located on municipal lands; and
- h. Other facilities deemed ineligible by the MCCAC.

## **2.3 REC Project Types**

### **2.3.1 Scoping Audits**

Scoping Audits are energy audits with a level of analysis that falls between an ASHRAE Level I or “walk-through audit” and an ASHRAE Level II, or an “investment grade audit”. Scoping Audits focus on identifying and estimating cost-saving and GHG reducing opportunities which will include several low or no cost opportunities and may include more capital-intensive opportunities. Scoping Audits provide direction and a base-level understanding of energy-saving opportunities within a facility and provide the necessary resources to prioritize and target these opportunities through an Implementation Project. Scoping Audits must be completed by an approved Program Ally.

A Municipality may move on to an Engineering Study, an Implementation Project, or both after the completion of a Scoping Audit.

### **2.3.2 Engineering Studies**

Engineering Studies are comprehensive, investment-grade reports which analyze the feasibility of large capital energy efficiency projects. Engineering Studies will include in-depth analysis on GHG reductions, and project economics, over the life of the equipment. Engineering Studies help give greater certainty on the performance of a proposed retrofit project. Engineering Studies must be completed by an approved Program Ally.

A Municipality may move on to an Implementation Project after the completion of an Engineering Study.

### **2.3.3 Implementation Projects**

Implementation Projects are the energy-saving retrofits, or energy conservation measures (ECMs) in which a rebate is requested through the REC program. If valid project information such as the expected energy and GHG savings are not available or provided upon application, an Engineering Study or Scoping Audit must be completed prior to proceeding with the Implementation Project.

Lighting related projects may utilize the Recreational Energy Conservation Lighting Project Calculator to prepare energy and GHG savings calculations and may proceed directly to an Implementation Project without a Scoping Audit or Engineering Study.

### **2.3.4 Eligible and Ineligible Energy Conservation Measures**

REC funds ECMs that will reduce GHG emissions. Rebates will not be provided for cosmetic or non-GHG reducing installation. The following are examples of eligible types of ECMs:

- Interior and exterior lighting and lighting controls;
- Building envelope upgrades including insulation and weather-stripping;
- Energy management control systems including direct digital controls, occupancy/motion sensors, and thermostats;
- Building automation systems;
- Heating, ventilation and air-conditioning (HVAC) systems including boilers and chillers, furnaces, heat pumps, ventilation systems, pipe insulation, air conditioners, thermal storage systems, and heat recovery systems;
- Motors including high-efficiency motors and variable frequency drives; and
- Combined heat and power systems.

Other ECMs, costs, or actions that are ineligible for rebates through REC include those that:

- Are considered design and in-house facility labour costs
- Merely terminate existing processes, facilities or operations;
- Relocate existing processes, facilities or operations out of the Province of Alberta;
- Are required by local, provincial, or federal law, building or other codes; or are standard industry practices;
- Reduce voltage or improve power factor or power quality other than an ancillary benefit for obtaining quantifiable energy savings;
- Involve installation of any equipment or system if such equipment or system, or the operation of either would not comply with all existing laws and regulations;
- Are regular routine maintenance;
- Are electronic equipment (i.e. computers, printers, photocopiers, etc.) and appliances (i.e. refrigerators, ovens, washers and dryers, etc.); and
- Include solar photovoltaics, electric vehicles, or electric vehicle infrastructure.

## 3.0 Financial Rebates

### 3.1 Rebate Rates

The REC program will provide rebates in accordance with the offers, rebate rates, funding maximums, and requirements in Tables 1 through 3. The approval and allocation of eligible funds will occur on a first-come, first-served basis. When available funding is fully committed, the program will be closed to further applications. Application pre-approval and payment are subject to technical review in accordance with the Engineering Guidelines available at [www.mccac.ca/programs/REC](http://www.mccac.ca/programs/REC). All offers, rebate rates, maximums, requirements and payment schedules are subject to change.

**Table 1: Scoping Audit Rebates**

Offer	Rebate and Funding Maximums	Requirements and Limitations
Scoping Audit	<p>Up to 100% of Scoping Audit costs (per facility) to a maximum of:</p> <ul style="list-style-type: none"> <li>• \$8,000 for dry sports centres</li> <li>• \$10,000 for arenas and curling rinks</li> <li>• \$10,000 for aquatic centres and pools</li> <li>• \$12,000 for multiplexes</li> </ul>	<ul style="list-style-type: none"> <li>• Cost estimate required to determine eligibility and maximums</li> <li>• Audit must be completed by pre-approved Program Ally contractors</li> <li>• Ineligible if the facility has undergone a similar audit within the previous 24 months</li> </ul>

**Table 2: Engineering Study Rebates**

Offer	Rebate and Funding Maximums	Requirements and Limitations
Engineering Study	<p>Up to 100% of Engineering Study costs (per facility) to a maximum of \$20,000 for all recreational facility building types</p>	<ul style="list-style-type: none"> <li>• Cost estimate required to determine eligibility and maximums</li> <li>• Study must be completed by pre-approved Program Ally contractors</li> <li>• Ineligible if the facility has undergone a similar study within the previous 24 months</li> </ul>

**Table 3: Implementation Project Rebates**

Implementation Projects will fund eligible ECMs on an individual basis to the lesser of 75% of the ECM cost or amount required to reach 1-year simple payback. Simple payback is calculated by dividing the net capital cost of implementing the ECM, by the annual energy cost savings produced by the ECM, as seen in the example equation below.

$$\text{Simple Payback (years)} = \text{Net ECM capital cost (\$)} / \text{Annual energy cost savings (\$/year)}$$

Offer	Rebate and Funding Maximums	Requirements and Limitations
Implementation Project	The lesser of 75% of ECM costs, <b>OR</b> the amount required to reach 1-year simple payback.	<ul style="list-style-type: none"> <li>• Cost estimate and invoice required from contractor to determine eligibility and rebate</li> <li>• ECMs with a simple payback of less than one year without rebates are ineligible</li> <li>• Project must, at a minimum, have a total installed cost of \$10,000 or greater before any rebates for pre-approval. Multiple measures may be combined on one application to reach the minimum project cost threshold</li> </ul>

The three hypothetical ECMs below provide example applications of the above rebate structure:

- Example ECM #1
  - Installed cost before rebate: \$20,000
  - Annual energy cost savings: \$5,000 per year
  - Simple payback before rebate: \$20,000 / \$5,000 per year = 4 years
  - Simple payback after applying REC program buydown: 1 year
  - REC program rebate for Example ECM #1: **\$15,000 or 75% of costs**

In the Example ECM #1, the 75% cost coverage maximum decreased the project cost to \$5,000, and as a result, the simple payback decreases to maximum of 1 year.

- Example ECM #2
  - Installed cost before rebate: \$4,000
  - Annual energy cost savings: \$2,000 per year
  - Simple payback before rebate: \$4,000 / \$2,000 per year = 2 years
  - Simple payback after applying REC program buydown: 1 year
  - REC program rebate for Example ECM #2: **\$2,000 or 50% of costs**

In the Example ECM #2, only 50% of cost are covered as the simple payback reached the maximum of 1 year.

- Example ECM #3
  - Installed cost before rebate: \$20,000
  - Annual energy cost savings: \$1,000 per year
  - Simple payback before rebate: \$20,000 / \$1,000 per year = 20 years
  - Simple payback after applying REC program buydown: 5 years
  - REC program rebate for Example ECM #3: **\$15,000 or 75% of costs**

In the Example ECM #3, the 75% cost coverage maximum decreased the project costs to \$5,000, and as a result, the simple payback decreases to 5 years.

### 3.2 Maximum Funding Limits

To enable broad participation by Alberta Municipalities, the total program funding for Scoping Audits, Engineering Studies, and Implementation Projects distributed to a single Municipality is capped at \$750,000 over the program lifespan. Municipalities may receive funding for one or more facilities. One facility may not receive more than \$750,000.

*The MCCAC, at its sole discretion, reserves the right to adjust the maximum funding cap per Municipality in response to program demand and changing market conditions.*

### 3.3 Payment Schedule

Both Scoping Audits and Engineering Studies are intended to identify energy-saving opportunities that a participating Municipality can target with an Implementation Project. Therefore, the payment for Scoping Audits and Engineering Studies are divided in two payments to encourage Municipalities to proceed with an Implementation Project. The first rebate payment of 50% is paid upon completion of a pre-approved Scoping Audit or Engineering Study. The second rebate payment of 50% is paid upon execution of an Offer Letter for an Implementation Project application.

Implementation Project rebates are paid in a lump sum after the Third-Party Administrator completes the review of Implementation Project completion documentation. In the event of Implementation Projects that receive greater than \$50,000 in rebates, MCCAC reserves the right to hold back up to 10% of the total rebate amount pending completion of site measurement to confirm the associated energy savings and greenhouse gas reductions. In some instances, additional metering may be required of the municipality. The need for a hold back as well as the need for additional metering will be assessed on a case by case basis.

### 3.4 Rebates Disbursement

The approval and allocation of qualified funds will occur on a first-come, first-served basis based on the time-stamp and date in which the executed Offer Letter is received. Applicants will be placed into the first-come, first-served queue in the order in which they submit a completed REC application to the satisfaction of the Third-Party Administrator and execute an Offer Letter. Funding will not be awarded retroactively. Eligible costs must be agreed upon and the Offer Letter must be executed prior to the Project commencing. The Project must be completed within 12 months of the date listed on the executed Offer Letter.

All rebates will be paid after the Third-Party Administrator has verified that the Project is complete. The verification process is described in detail in Section 4.0.

### 3.5 Rebate Stacking

The Municipality agrees to disclose to the MCCAC participation in any other government programs through which funding towards the cost of the Project is being pursued. The Municipality is eligible to access other government programs for funding towards the cost of the Project. However, the maximum amount of combined funding from all sources cannot exceed the total eligible costs of the Project.

The Municipality is not eligible to access multiple rebates provided through the Alberta Climate Leadership Plan for funding towards the same Project.

## 4.0 How to Participate

### **Step 1: Review Program Materials**

Prior to getting started in the REC program, the MCCAC recommends that interested Municipalities review all REC program materials in detail such as this Guidebook, the Terms and Conditions, and any other information available on the [REC web page](#).

### **Step 2: Submit an Expression of Interest (EOI)**

Municipalities must submit an [EOI](#) to notify the MCCAC of their intent to participate and for eligibility screening purposes prior to any REC project starting. The Third-Party Administrator will review all information provided in the EOI and will contact the municipality to provide information regarding subsequent stages of the application process.

*Note: Completion of the EOI does not secure funding or a place in the first-come, first-serve queue. For details on how this queue is established, see Section 3.4.*

### **Step 3: Submit a REC Application**

Municipalities must submit a REC Application and all required attachments to [REC@clearesult.com](mailto:REC@clearesult.com). The REC Application Form is available on the REC program webpage at [www.mccac.ca/programs/REC](http://www.mccac.ca/programs/REC).

Each REC Application must include the following documentation as an attachment to the REC Application, as applicable:

- A copy of the Scoping Audit quotes
- A copy of the Engineering Study quote
- A copy of the Implementation Project quote
- A copy of the energy audit/engineering study that includes financial and greenhouse gas analysis for the intended Implementation Project
- A copy of the REC Lighting Project Calculator that includes energy and GHG savings calculations (for lighting projects only)

The Third-Party Administrator will review all information provided in the application and will contact the Municipality to gather additional information or documentation where required, as well as provide information regarding subsequent stages of the application process.

*Note: completion of an application does not secure funding or a place in the first come, first serve queue. For details on how this queue is established, see Section 3.4.*

### **Step 4: Receive Pre-Approval to Proceed with Scoping Audit, Engineering Study or Implementation Project and Sign Offer Letter**

After receiving pre-approval for your project, you will receive an Offer Letter that outlines the pre-approved rebate value for a Scoping Audit, Engineering Study, or Implementation Project (per ECM). Payments are contingent upon the service provided or the equipment being installed as described in the application. Review, sign, and submit the Offer Letter.

### **Step 5: Complete Project**

Complete a Scoping Audit, Engineering Study, or Implementation Project. Projects must be completed within 12 months of the date listed on the executed Offer Letter. Municipalities are responsible for ensuring that all work is completed by the deadline. Should an extension of the completion deadline be required, the Municipality must submit a request to the MCCAC in writing detailing the nature of the request.

### **Step 6: Submit Payment Request with Completion Documentation**

After completing the Project, submit the required documentation which may include, but is not limited to, equipment purchase dates, installation dates, proof that the equipment is operational, manufacturer specifications, warranty information, ECM layout descriptions, metering, data collection, utility bill data analysis, Scoping Audit or Engineering Study reports, final invoices, and proof of payment to the REC portal.

### **Step 7: Complete Public Engagement and Profiling Activities (as applicable)**

Implementation Projects require the completion of public engagement and profiling activities prior to receiving rebate payments. Submit proof of completion the following activities to [contact@mccac.ca](mailto:contact@mccac.ca):

- a. Featuring the Project in the MCCAC's web-based project showcase;
- b. Issuing a media release for the project or any other public engagement activity deemed acceptable by the MCCAC;
- c. A set of high-resolution photographs of the Project suitable for print publication. Photographs must show the Project during construction and after completion;
- d. A brief abstract describing the Project including one or more quotes from Municipal leaders, to be used for MCCAC program marketing; and
- e. Completion of program evaluation.

### **Step 8: Request and Receive Payment**

Submit rebate payment request form through the REC portal and receive your rebate payment via cheque.

## **5.0 Remedies and Warranties**

### **5.1 Refunds**

The Municipality shall immediately refund to MCCAC any payment received under the REC program not in accordance with the REC Guidebook and the Offer Letter upon notice being provided to the Municipality by the MCCAC. Failure to make repayment as required by MCCAC creates a debt owing to the Government of Alberta that can be offset against any money the Government of Alberta owes to the Municipality.

### **5.2 Right of Set-Off**

The Municipality agrees that the MCCAC may off-set against any other grant or amount payable to the Municipality under any programs administered by the MCCAC any amounts that become repayable by the Municipality to the MCCAC under the REC program.

### **5.3 False or Misleading Information**

If the Municipality provides any false, misleading, or incomplete information under the REC program, the Municipality shall forgo all rights to benefit from the REC program.

### **5.4 Environmental Attributes or Products**

"Environmental attributes" means emission offsets, renewable energy certificates, renewable energy credits, and any and all other current or future credits, benefits, emissions reductions, offsets or allowances, however entitled, named, registered, created, measured, allocated or validated

- a) that are at any time recognized or deemed of value, or both, by any buyer, applicable law, or any voluntary or mandatory program of any government or other person and
- b) that are attributable to
  - i. generation by the Project and;
  - ii. the emissions or other environmental characteristics of such generation or its displacement of conventional or other types of energy generation through the avoidance of environmental impacts on air, soil or water, including but not limited to the emission of greenhouse gases.

The Municipality or applicant will not register or claim any environmental attributes generated by the Project. The Municipality or applicant will not transfer or assign any rights, title and interests, if any, in all environmental attributes generated by the Project to any person.

The Municipality or applicant warrants that no environmental attributes generated by the Project have been claimed, sold or otherwise transferred to a third party and that no other person has any claim to or ownership of the environmental attributes generated by the Project.

### **5.5 Limitation of Liability**

MCCAC's sole liability is limited to paying the properly qualified rebates specified herein.

The Municipality acknowledges that any service provider, Program Ally, or other provider selected by the Municipality is not an agent, contractor or subcontractor of MCCAC.

MCCAC shall have no obligation to maintain, remove or perform any work whatsoever on the equipment installed.

Neither MCCAC nor any of its affiliates shall be liable to the Municipality or to any other party for a Program Ally's, service provider and/or installation contractor's failure to perform, for failure of the Installed Incentivized Equipment and Products to function, for any damage to the Municipality's premises caused by the Program Ally, service provider and/or installation contractor, or for any and all damages to property or injuries to persons caused by or arising from any activities associated with this program.

## REC Checklist

### Step 1: Review Program Materials

- Review the REC program webpage, REC Guidebook, and Terms and Conditions available at [www.mccac.ca/programs/REC](http://www.mccac.ca/programs/REC).

### Step 2: Submit the REC EOI

- Complete and submit an [Expression of Interest](#).
- Receive approval to proceed to Step 3 from the MCCAC.

### Step 3: Submit a REC Application

- Submit a REC Application with all supporting documentation to [REC@clearesult.com](mailto:REC@clearesult.com).

### Step 4: Receive and Sign Offer Letter

- Receive, review, sign, and submit the Offer Letter.

### Step 5: Complete Project

- Complete Scoping Audit, Engineering Study, or Implementation Project within 12 months of signing the Offer Letter.

### Step 6: Submit Completion Documentation

- Submit the necessary completion documentation.

### Step 7: Complete Public Engagement and Profiling Activities (as applicable)

- Submit proof of completion of the required public engagement and project profiling activities.

### Step 8: Request and Receive Payment

- Submit rebate payment request form through the REC portal.
- Receive your rebate payment via cheque.
