

The sun is shining on  
Alberta municipalities

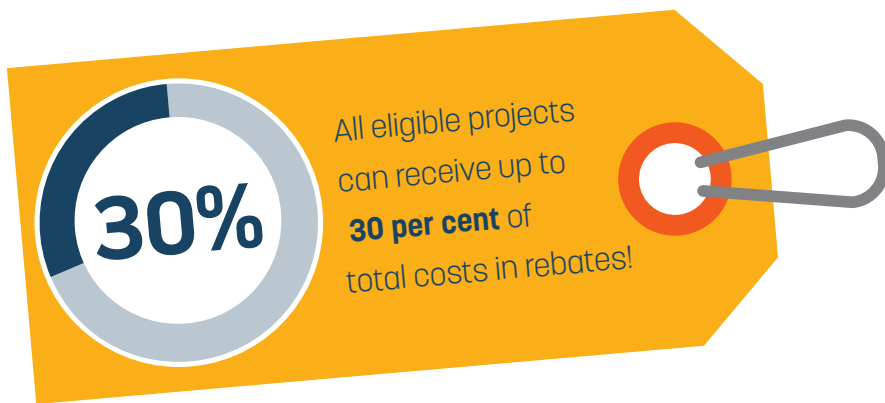

# Alberta Municipal Solar Program

Financial incentives are available for Alberta communities that want to develop solar projects locally ... and there's a bonus available for first-time applicants.

The Alberta Municipal Solar Program is working hard for your community!

## PROGRAM FUNDING

### First-Time Applicant Bonus Now Available

Now, an additional bonus rebate of \$0.25/watt is available to municipalities that have not previously participated in the AMSP for their first project, to a maximum of \$250,000!

## ABOUT THE PROGRAM

### Did you know ...

Solar energy can provide safe, clean, affordable, and local electricity to power homes, businesses and community buildings? A municipality's role can take many forms including ensuring that permitting processes are solar-friendly and leading by example with direct installations of solar on municipal buildings.

The Alberta Municipal Solar Program provides financial incentives to Alberta municipalities who install grid-connected solar photovoltaics (PV) on municipally owned facilities or land and complete public engagement for the project.

## HOW TO APPLY

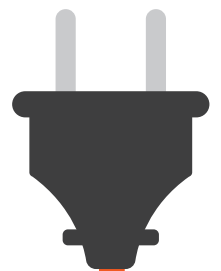

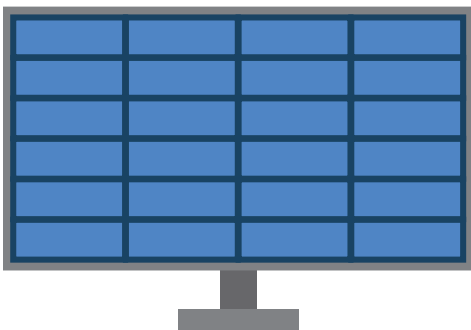

The existing Alberta Municipal Solar Program (AMSP), run by the Municipal Climate Change Action Centre (MCCAC), builds on past successes and expands the number of Alberta municipalities able to reduce operational costs and support the reduction of greenhouse gas emissions.

**Interested participants are invited to submit the AMSP Expression of Interest as a first step. You can learn more at [mccac.ca/programs/AMSP](http://mccac.ca/programs/AMSP).**

## ELIGIBILITY CRITERIA

Participants are eligible to receive a rebate per watt of total installed capacity (S/W), as per the table below. The **rate tier is determined by the total installed capacity** of a project submitted through a single AMSP Application. The rebate provided by the MCCAC will not exceed 30 per cent of eligible expenses. All funding is issued after the MCCAC has verified that the project is complete.

Total Installed Capacity (DC)	Rebate
<10 kilowatts	\$0.90/watt
10 kilowatts to <150 kilowatts	\$0.75/watt
150 kilowatts to <2 Megawatts	\$0.60/watt
2 Megawatts to 5 Megawatts	\$0.55/watt
